Confined Space Identification Checklist

Below is an example of a checklist to help identify and classify a space. The checklist should be revised to best fit the type of construction being performed.

**PART I – Is this space a confined space?**

___ 1. Is the space large enough so an employee can bodily enter and perform work?
___ 2. Does the space have limited or restricted means of entry and exit?
___ 3. Is the space not designed for continuous occupancy?

If the answer is yes to all items in Part I, continue to Part II. If the answer is no to any of the items in Part I, the space is not considered a confined space.

**PART II – Is it a Permit-Required Confined Space?**

___ 1. Does the space contain or potentially contain a hazardous atmosphere?
___ 2. Does the space contain any chemicals or chemical residues?
___ 3. Does the space contain any flammable/combustible substances?
___ 4. Does the space contain or potentially contain any decomposing organic matter?
___ 5. Does the space have any pipes which bring chemicals into it?
___ 6. Does the space have any materials that can trap or potentially trap, engulf, or drown an entrant?
___ 7. Is vision obscured by dust at 5 feet or less?
___ 8. Does the space contain any mechanical equipment servicing the space?
___ 9. Does the space have converging walls, sloped floors or tapered floor to smaller cross-sections which could trap or asphyxiate an entrant?
___ 10. Does the tank or vessel contain rusted interior surfaces?
___ 11. Does the space contain thermal hazards (e.g. cold, hot)?
___ 12. Does the space contain excessive noise levels which could interfere with communication with an attendant?
___ 13. Does the space present any slip, trip, or fall hazards?
___ 14. Are there any operations conducted near the space opening which could present a hazard to the entrant?
___ 15. Are there any hazards from falling objects?
___ 16. Are there lines under pressure servicing the space?
17. Are cleaning solvents or paints going to be used in the space?
18. Is welding, cutting, brazing, riveting, scraping, or sanding going to be performed in the space?
19. Is electrical equipment located in or required to be used in the space?
20. Does the space have poor natural ventilation which would allow an atmospheric hazard to develop?
21. Are there any corrosives which could irritate the eyes in the space?
22. Are there any conditions which could prevent any entrant’s self rescue from the space?
23. Are there any substances used in the space which have acute hazards?
24. Is mechanical ventilation needed to maintain a safe environment?
25. Is air monitoring necessary to ensure the space is safe for entry due to a potential hazardous atmosphere?
26. Will entry be made into a diked area where the dike is 5 feet or more in height?
27. Are residues going to be scraped off the interior surfaces of the vessel?
28. Are non-sparking tools required to remove residues?
29. Does the space restrict mobility to the extent that it could trap an irritant?
30. Is respiratory protection required because of a hazardous atmosphere?
31. Does the space present a hazard other than those noted above which would make it a permit space?

If any other questions in PART II have been checked yes, the confined space is a Permit-Required Confined Space (PRCS). Entry into these spaces must be performed under the protection of your confined space program.
